## Cisco academy chapter 11 test answers

Cisco ITE latest or IT Essentials v6.0 chapter 11 Exam Answers PC hardware and software (ITE Version 6.00) collection year 2017, 2018 and 2019 Sheet 100%. It Essentials has been known as ITE. The following are the answers to the question review. Guarantee approved. ITE v6.0 chapter 11 exam responses has some new update to old version 5. You can review all responses in exam chapter 11. You will be rated 100% with this version 6.0. Good luck for ite v6.0 Review! the desired image quality printer power size supplies paper quality the cost of Serial InkJet Cartridges FireWire PS/2 HDMI eSATA Ethernet Serial USB Firewire Heat creates a steam bubble in the chamber. The heat is applied to the ink reservoir of each nozzle. The vibration of the crystal controls the flow of ink. A charge applies to the print head. the development of the heat electric charge light fuse transfer load is the interface in Windows that identifies a unique printer attached to the workstation. This is the cache inside a printer that stores documents that will be printed to a queue. It is a software that converts a document into the format that a printer can understand. This is the configuration code that is sent to a printer to identify the operating system of the work station. The printer must be configured first. The workload operating system must be upgraded first. The printer driver may first need to be installed before connecting the printer. The Microsoft download site must first be searched for the printer driver. the printer that is set as the default printer for the software-based printer used to create PDF files the software-based printer used to create XPS files a manual selection, which is always required For Document Options replace global options. Global options prevail over options per document. Unable to configure options per document. It is not possible to configure global options. Calibrate the printer. Adjusts the printer coil. Replaces the fuse. Replace the drum. The printer does not have enough buffer for an entire photo. The printer is not configured for duplex printing. The paper is not suitable for printing photographs. The printer is not configured for proper paper orientation. add additional drivers for other operating systems to add additional drivers for other printers to the network to add additional drivers for duplex printing to add additional drivers for other printers connected to the IEEE 802.11 standard Bluetooth WiMax satellite microwave Windows firewall Windows Defender IEEE 802.1.1 virtualization option for file sharing and in BIOS a print server dedicated to PC a computer-shared print server a hardware printing server a print server that is implemented in software provide print resources to all connected client computers storing print jobs in a queue until the printer is ready to make sure connected client computers have updated printer drivers store documents sent to the printer provide uninterrupted power to the printer Reset Printer Page Counters if available. Replace the laser printer toner at the set default time intervals. Clean the inkjet printing heads when they stop working. Disconnect the printer from the power supply when it is not in use. Clean the heating element regularly with isopropyl alcohol. Clean the inside of the printer with a vacuum cleaner with a HEPA filter. Keep the paper dry in an environment of low humidity. Clean the outside of the printer with a damp cloth. verify the solution and functionality of the system by identifying the problem by testing a theory to determine the cause of the problem by documenting findings, actions and results documenting the findings, actions and results that verify the solution and functionality of the system by testing a theory to determine the cause of the high humidity problem the type of defective paper a faulty print cartridge misaligned the print heads of an incorrect print controller that ensures that the cables in the printer to update the print driver. cartridge restart printer restart print spooler update printer driver clean printer software is configured to save toner. The printer tape is worn. The ink cartridge is empty. The printer is loaded with a paper type other than photo paper. The screen contrast is too low. The printer is not turned on. The printer has no ink. The print head is clogged. ITE – It Essentials Chapter 11 Exam Answers v6.0 2018 2019 100% 01 1 What two statements about a set of services identifier (SSID) are true? (Choose two.) responsible for determining the strength of the signal used to encrypt the data sent over the wireless network all wireless devices in the same WLAN must have the same SSID consists of a 32-character string and is not sensitive to the case tells a wireless device to which WLAN belongs to 2 What type of network attack involves disabling or corruption of networks systems, or services? access attacks denial of service attacks reconnaissance attacks malicious code attacks 3 What command will back up the configuration that is stored in NVRAM to a TFTP server? copy ftp running-config copy startup-config ftp copy running-config ftp copy ftp startup-config 4 Open ACTIVITY PT. How long will a user be blocked if the user exceeds the maximum allowed number of failed login attempts? 3 minutes 1 minute 4 minutes 2 minutes 5 Fill the void. Do not use abbreviations. The command » displays the version » that is issued on a router is used to verify the value of the configuration record 6 What is a security feature of using NAT on a network? denies that all packages that come from private IP addresses allows you to hide internal IP addresses from external users who deny that all internal hosts communicate outside their own network allows you to hide external IP addresses to internal users 7 A network administrator has determined that several computers in on network are infected with a worm. What sequence of steps should be followed to mitigate the worm attack? containment, quarantine, treatment and treatment of inoculation, quarantine, inoculation and inoculation of containment, containment, quarantine and containment of treatment, inoculation, quarantine and treatment 8 Which WLAN security protocol generates a new dynamic key each time a client establishes a connection with the AP? PSK WPA EAP WEP 9 See the exhibition. The base documentation for a small business had time statistics back and forth of 36/87/132 between hosts H1 and H3. Today the network administrator checked connectivity by pinging between hosts H1 and H3 which resulted in a round-trip time of 1458/2390/6066. What does this indicate to your network administrator? Something is causing interference between H1 and R1. H3 is not properly connected to the network. The performance between the networks is within the expected parameters. Connectivity between H1 and H3 is fine. Something is causing a time delay between the networks. 10 When should an administrator establish a network baseline? when traffic is at the high point of the network when there is a sudden drop in traffic at the lowest point of network traffic at regular intervals over a period of time 11 A ping fails when performed from the R1 router to the directly connected router R2. Then, the network administrator proceeds to issue the order of the neighbors of cdp of the show. Why would your network administrator issue this command if ping failed between the two routers? Your network administrator wants to verify the IP address configured on the R2 router. Your network administrator suspects a virus because the ping command did not work. Your network administrator wants to determine whether connectivity can be set from an un connected network directly. Your network administrator wants to verify layer 2 connectivity. 12 What is the true statement about CDP on a Cisco device? To disable CDP globally, the non-cdp enable command must be used in interface configuration mode. The cdp neighbor's detail order will display a neighbor's IP address only if there is connectivity layer 3. CDP can be disabled globally or in a specific interface. Because it runs on the data link layer, the CDP protocol can only be implemented on switches. 13 What is the purpose of issuing the cd nvram commands: then say in the privilege exec mode of a router? to list NVRAM content to clear NVRAM content to copy NVRAM directories to direct all new files to NVRAM 14 A network administrator checks the security record and realizes there was unauthorized access to an internal file server over the weekend. After a subsequent investigation of the file system registry, the administrator realizes that important documents were copied to a host located outside the company. What kind of threat is depicted in this scenario? identify the loss of service interrupt information theft data 15 If a configuration file is to a USB flash drive attached to a router, what should your network administrator do before the file can be used on the router? Edit the configuration file with a text editor. Use the dir command on the router to remove automatic literacy windows from files on the flash drive. Converts the FAT32 file system to FAT16. Change the rw file permission to rw. 16 What kind of network design consideration would be more important to a large company than to a small business? Internet router redundancy firewall low density port switch 17 Which protocol supports the fast delivery of transmission media? TCP RTP SNMP POE 18 See the exhibition. An administrator is trying to solve connectivity problems between PC1 and PC2 and uses the PC1 tracert command to do so. Depending on the output shown, where should the administrator start troubleshooting? SW2 R1 R2 PC2 SW1 19 Which two statements characterize the security of the wireless network? (Choose two.) Wireless networks offer the same security features as cable networks. An attacker needs physical access to at least one network device to launch an attack Using the default IP address at a hotspot makes piracy easier. Some RF channels provide automatic wireless data encryption. With SSID broadcast disabled, an attacker must know the SSID to connect. 20 What two actions can be taken to prevent a successful attack on an email server account? (Choose two.) Never send your password over the network in plain text. Never use passwords that require the Shift key. Limit the number of unsuccessful attempts to log on to the server. Only authorized access to the server room is allowed. 21 How should traffic flow be captured to better understand a network's traffic patterns? when it is from a subset of users during low usage times when it is in the main network segment only during maximum utilization times 22 What do WLANs do that conform to IEEE 802.11 standards allow wireless user to do? Use mice and wireless keyboards to create a local one-to-many network using infrared technology to use mobile phones to access remote services in very large areas connecting wireless hosts to hosts or services on a 23 Fill blank cable Ethernet network. » VoIP » defines the protocols and technologies that implement the transmission of voice data over an IP network. 24 Fill in the void. Do not use abbreviations. The Show » File Systems » command provides information about the amount of flash memory available and free and its permissions for reading or writing data. Data.
